ANTI-SKID EFFECT

ANTISKID ADDITIVE

Series 0851

Structuring agent with antiskid and anti-slip properties

◆ General information

Packages: 1 kg

◆ Technical features

Structuring agent with anti-slip effect suitable for providing anti-slip effect to the products to which it is added. The product guarantees excellent wear resistance, surface hardness and, compared to traditional mineral grains, reduced noise

◆ Application field

To obtain excellent homogeneity, it is recommended to add the product to component A before hardening and mix with an electric stirrer at 300 - 400 rpm for a few minutes. The additive must not be sprinkled on the cement substrate, but must simply be added to the enamel.
